

Input

Q: Sara and Joe have a combined height of 120 inches. Joe is 6 inches more than double Sara's height. How tall is Joe?

SAT Solution

```
sara_height = Variable()  
joe_height = Variable()  
total_height = 120  
joe_height = 2 * sara_height + 6  
total_height = sara_height + joe_height  
solve(joe_height)
```

CoT Solver

```
# We know total_height = sara_height + joe_height, and joe_height = 2 *  
sara_height + 6.  
# So total_height = sara_height + 2 * sara_height + 6 = 3 * sara_height + 6  
# Therefore, sara_height = (total_height - 6) / 3 = (120 - 6) / 3 = 114 / 3 = 38  
# joe_height = 2 * sara_height + 6 = 2 * 38 + 6 = 76 + 6 = 82  
# The answer is 82
```

No Solver

```
# The answer is 82
```
